Chapter 1

Questions for your revision

Learning outcomes

By the end of this topic you should be able to;

- *Try to answer this questions independently*
- *Answer as many as possible*

1. Summary

Geographical Information Systems is a very wide unit. Students can explore it independently. It ranges from as far as accessing Google Maps and how to include areas/places in the Maps. According to the Bsc IT syllabus, everything has been covered in Lesson 1 to 9. Lesson 10 is for your revision.

2. Sample questions

The below questions are for your revision. Try to answer them independently.

- Identify some of the major issues which need to be considered when setting up a web-based GIS.
- Explain the distortions that might arise between different parts of a map.
- Identify the two spatial data models used most commonly in GIS.
- Identify some of the major types of hybrid database structure used in GIS and explain why hybrid structures are so frequently used.
- Discuss the strengths and weakness of raster and vector data structures in GIS.
- Identify the characteristics of a GIS that distinguish it from other kinds of computerized systems.
- Explain the cartographic model
- Identify and briefly discuss the three types of "raster" data.
- Explain the implementation process of GIS
- Identify and briefly describe the four resolution types that need to be considered when assessing the level of detail in a GIS map.
- Differentiate between spatial data from non-spatial data
- Briefly explain the difference between traditional GIS and spatial analysis.
- Describe in detail the coordinate system

- List the benefits of a GIS
- Distinguish and explain types of sensors.

Revision Questions

EXERCISE 1. With an aid of a diagram, describe how GIS works.

Example. Differentiate between raster and vector systems.

Solution: Revise. □

EXERCISE 2. What is a topology in GIS?

Solutions to Exercises

Exercise 1. Revise. Exercise 1

Exercise 2. Revise. Exercise 2
